

MIDDLEWARE

Code 301

AGENDA

- Topics for Code Review
- GOAL: add back filters, but better
- to do that, we'll need... Pancakes...uh... I mean Middleware
- Mapping articles objects to jQuery objects

REQUEST -> RESPONSE

```
// this function transforms a name into a greeting
function greet(name) {
  return 'Hello ' + name;
}
```

```
// the server transforms a request into a response
function request(data) {
  response = data;
  return response;
}
```

```
// transform a request into a response, through middleware
function request(data) {
  response = greet(data);
  return response;
}
```

MIDDLEWARE

PAGE.JS MIDDLEWARE

➤ just another function

```
1 page('/', firstFunction, secondFunction);  
2  
3 page('/', articlesController.loadTemplate, articlesController.index);
```
